

Electrical Hazard Awareness (EHAP)

Spanish Language Safety Training

With Eduardo Medina

Hosted by The Mulch Center

Facilitated by Streamside Green

Electricity is a serious and widespread hazard to arborists. In fact, electricity causes about 30 percent of all fatalities in the tree care industry, making it the leading cause of worker fatalities.

Since even a street lamp circuit or phone line can be energized with enough voltage to kill, almost all arborists in the field have some exposure to this hazard. Workers don't even have to touch a wire to be electrocuted; about half of all electrocution fatalities are the result of indirect contact. Tree branches and other conductive objects are an ever-present threat for the industry.

ANSI Z133.1 4.1.3 requires employers to train all employees to recognize and avoid electrical hazards. This workshop, along with documented on-the-job training, meets that requirement, as well as the OSHA 1910.269 safety standard.

Registration includes an EHAP training manual, copy of current Z133.1 safety standards, viewing during class of *Electrical Hazards and Trees DVD* and *Aerial Rescue Training Program DVD*.

Wednesday, January 18

8:00am - 4:00pm

The Mulch Center

21457 Milwaukee Ave.
Deerfield, IL 60025
